

STATUS OF HOUSING ELEMENTS IN CALIFORNIA

2007 REPORT TO THE LEGISLATURE

California Department of Housing and Community Development

Tierra Del Sol

Tierra del Sol was made possible by Proposition 46 housing bond funds, awarded through the California Department of Housing and Community Development's Multifamily Housing Program.

Tierra del Sol is located at 7507 Canoga Avenue in Canoga Park, California and consists of 119 affordable apartment homes. It is part of a five-acre complex that includes a learning center with after-school instruction, a community center with computer and family services, a parking garage, and a kindergarten through grade five New Academy Charter Elementary School with a gymnasium.

Built on a 5-acre block abandoned by the Los Angeles Department of Water and Power, Tierra del Sol apartments and school marks a first in the San Fernando Valley and in California: It blends affordable, five bedroom apartments with a charter school for grades K-5.

The facility was spearheaded by New Economics for Women - a Los Angeles-based agency founded 16 years ago by Latina women to help single mothers reach economic self-sufficiency.

Annual Report to the Legislature: Status of Housing Elements in California

State law requires each city and county to adopt a general plan containing at least seven elements, including housing. Unlike the other mandatory general plan elements, the housing element is subject to detailed statutory requirements and mandatory review by a State agency, the Department of Housing and Community Development (Department). Housing elements have been mandatory since 1969. This reflects the statutory recognition that the availability of housing is a matter of statewide importance and that cooperation between all levels of government and the private sector is critical to attainment of the state's housing goals. The regulation of the housing supply through local government's planning and zoning powers affects the state's ability to achieve its housing goal of "decent housing and a suitable living environment for every California family" and is critical to the state's long-term economic competitiveness.

This report, required by Health & Safety Code Section 50459(c), describes the status of local government compliance with housing element law statewide and by region. Detailed compliance information and electronic copies of review findings are available on the Department's website at www.hcd.ca.gov/hpd/hrc/plan/he/status.pdf and are updated on a monthly basis.

California's Continuing Housing Crisis

An adequate supply of housing is a fundamental ingredient of a prosperous economy and quality environment. The state must have a sufficient supply of safe and affordable housing to preserve existing jobs and attract new employers. Further, an adequate supply and choice of housing, in the right places, provides the opportunity to maximize land resources, mitigate environmental impacts including efforts to reduce greenhouse gas emissions, preserve natural and agricultural resources and improve the efficiency of the state's transportation systems.

The availability and affordability of housing remains an issue of vital statewide importance. Many factors, including continued strong population growth and rising land and regulatory costs increasingly challenge the attainment of California's housing goals. California's population has continued to grow by approximately 500,000 each year for more than the last fifty years. To meet the demand of new households, California would need to add about 220,000 new units each year. Unfortunately, production has substantially lagged behind this demand despite recent record production years. For example, production lagged

over 11,000 units with 208,972 built in 2005, the highest production since 1989. During 2007, 112,289 new homes and apartments were built, a reduction of 51,991 units from 2006 and well under California's annual demand of 220,000 units. Continued supply shortages have resulted in unprecedented affordability gaps and with permit projections expected to dip below 100,000 units in 2008, this historic unmet need critically impacts both supply and affordability of housing for both renter and owner households at all income levels.

The severe shortage of affordable housing disproportionately impacts lower- and moderate-income households and particularly special needs groups such as the elderly, farmworkers, homeless and persons with disabilities. Too many families, seniors and workers are forced to pay more than 50 percent of their income to cover rent. The "Housing Wage" in California is \$22.86 - more than three times the minimum wage. A minimum wage worker would have to work at least 135 hours per week to afford the average two-bedroom unit. With a median home sales price of \$475,460 as of December 2007, California has the second lowest homeownership rate in the country (60.2 percent) and 8.6 percentage points lower than the national homeownership rate.

Foreclosure rates are an illustration of the extent to which California's median housing market has become increasingly unaffordable for California's median income households, as well as its low-income households. California metropolitan areas have led the nation in foreclosures for 10 months in a row. In November 2007, California accounted for 20 percent of the 201,950 foreclosure filings reported nationwide - 2.2 times the national average and 213 percent above the statewide 2006 total. While foreclosure rates have increased by 158 percent statewide between 2006 and 2007, the statewide median cost of a single-family home has decreased only 7 percent between November 2006 and 2007 (from \$441,990 to \$410,990). Foreclosures are only further aggravating the last decade of unmet need for housing, particularly for multifamily units, as families are forced to move from their homes and find alternative housing. Additionally, the tightening of the financial markets and loan criteria are allowing fewer and fewer households to qualify as first-time homebuyers.

***Housing
Element Law***

Housing element law is the state's primary market-based strategy to increase housing supply, affordability and choice. The law recognizes that in order for the private sector to adequately address housing needs and demand, local governments must adopt land-use plans and regulatory schemes that provide opportunities for, and do not unduly constrain, housing development.

Housing element law requires local governments to adequately plan to meet their existing and projected housing needs including their share of the regional housing need. The primary goals of housing element law are to increase housing supply and affordability and address existing housing needs. Additional fundamental goals include conserving existing affordable housing stock, improving housing conditions, removing regulatory barriers to the development, improvement and maintenance of housing, expanding equal housing opportunities and addressing the special housing needs of the state's most vulnerable residents (seniors, farmworkers, homeless and persons with disabilities).

Housing elements, along with the other mandated general plan elements, provide the framework for development in all local communities. One of the most important components of housing element law is the requirement that local governments provide adequate zoning capacity for a variety of housing types to accommodate projected housing needs. Designating sufficient land with appropriate zoning is necessary to meet housing demand. Ensuring the availability of appropriately zoned land is a critical first step in addressing California's housing needs, especially for housing affordable to very low-, low- and moderate-income households. While planning and zoning appropriately for housing does not guarantee development, the lack of a supply of appropriately zoned land guarantees housing will not be built.

The housing element also provides a powerful tool to address the special housing needs of Californians including the homeless, farmworkers and persons with disabilities. The housing element, through specific statutory requirements, ensures local governments promote a variety of housing types including multifamily rental units, manufactured housing, transitional housing and other supportive housing types as well as emergency shelters.

The Department's review of housing elements ensures local governments use their zoning and land-use authority to provide opportunities for housing development and also not unduly constrain housing supply and choice. The review process produces tangible results that facilitate housing production through increased awareness and commitment to zoning strategies that increase the inventory of land available for housing. Housing element compliance provides an indication of the status of statewide planning and land-use objectives, including the extent to which jurisdictions have zoned development capacity for an adequate supply of housing in the short term. Housing element compliance is also intrinsically linked to other statewide land-use goals, including the development of infill and mixed-use development, promotion of higher densities, improving jobs/housing balances, and preserving important open space and agricultural resources.

Jurisdictions in compliance have also identified potential constraints to housing and identified resources to facilitate and assist the development of housing affordable to the workforce and other special needs populations.

The State's interest in ensuring local governments adequately plan for housing development and growth reflects the integral role housing plays in the overall economic vitality of California. The Department has long emphasized the linkage between an adequate supply of safe and affordable housing and a strong vibrant economy. The cooperation between government at all levels and the private sector is critical to meeting the state's housing goals. Effective oversight of housing element law, through the Department's review and certification of local governments' housing elements, is a key factor in ensuring housing affordability and availability for all Californians.

**Record
Compliance
Levels**

The Department is pleased to report that, as of December 31, 2007, 80 percent of California's local governments have adopted compliant housing elements — the highest compliance rate ever achieved.

As of December 31, 2007, 535 cities and counties were required to adopt a housing element in compliance with State law. Of these:

- 80 percent (429 jurisdictions) submitted an adopted element the Department found in compliance,
- 8 percent (45 jurisdictions) adopted an element the Department found out of compliance,
- 1 percent (8 jurisdictions) submitted an element under Department review, and
- 10 percent (53 jurisdictions) were still in the local process of updating and adopting their element.

Increasingly, local governments have effectively responded to the challenge of providing housing opportunities. This response is reflected in a record compliance level as well as record building permit issuance among jurisdictions with housing elements in compliance with State housing element law.

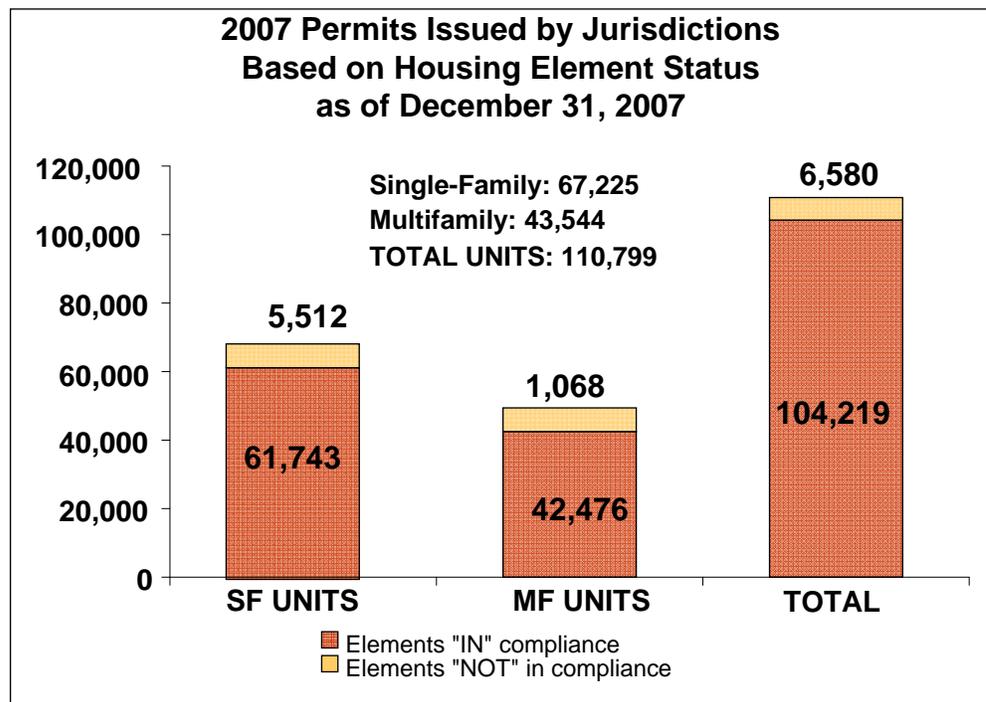

Effective planning for housing produces good results. While actual housing construction is dependent upon many factors including market conditions and the availability of financing; effective local planning,

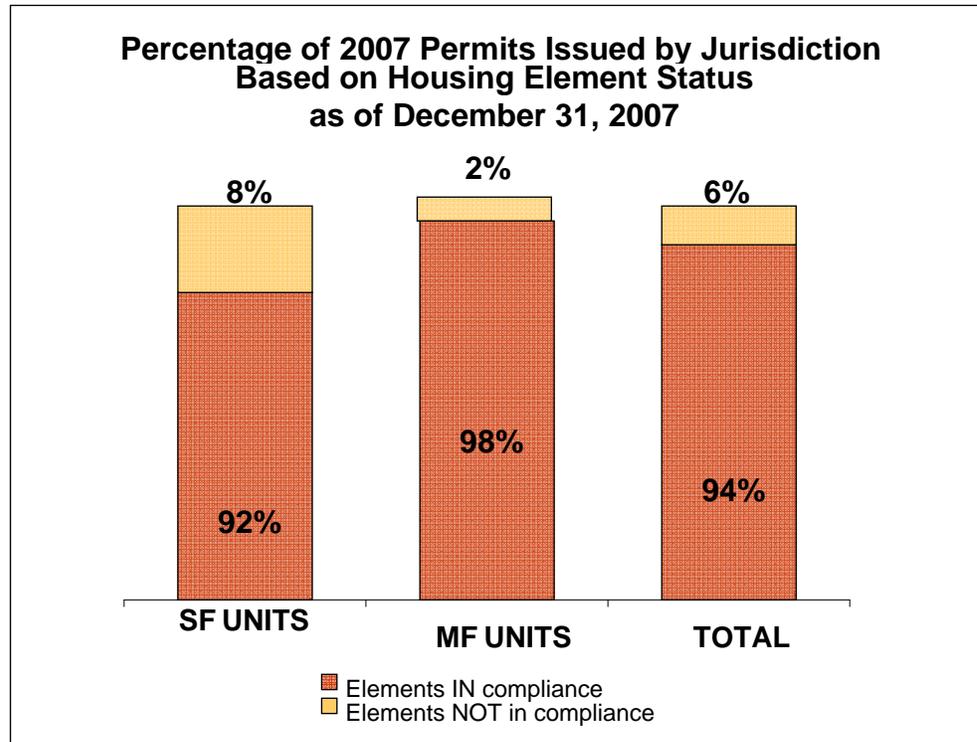

including zoning sufficient land for residential uses, clearly results in increased housing production, choice and affordability.

The Department has found that jurisdictions that plan to address their community's needs through the adoption of a compliant housing element consistently approve more building permits than those with housing elements out of compliance. This is especially true when evaluating multifamily building permits. For example, from 2000 through 2007, compliant jurisdictions issued on average 87 percent of all multifamily permits issued annually in California.

A review of building permit data shows significant increased permit activity beginning in early 2000 corresponding to the most recent update cycle of local housing elements. During most of the 1990s, local governments were not required to update their housing elements. On a statewide basis, updates of local housing elements were not initiated again until 2000. While rates of housing element compliance increased, so did the number of building permits issued, with an increasing percentage of the permits being issued by local governments with housing elements in compliance.

For 2007, as shown in the charts below, jurisdictions with a housing element in compliance issued a significantly higher percentage and number of residential permits. Of the total 110,799 building permits issued in 2007 reported by the Construction Industry Research Board, 94 percent were issued by local governments whose housing elements were in compliance. These same jurisdictions issued over 92 percent of total single-family permits and 98 percent of total multifamily permits.

***The Role of
the Housing
Element in
Addressing
Statewide
Challenges***

The housing element update process creates opportunities to increase interest in smart planning strategies and facilitates the ability of localities to move from rhetoric to action. The housing element provides both practical and policy tools to promote efficient land-use patterns while meeting critical housing needs.

The state is set to begin a new cycle of housing element updates beginning in 2008. Housing elements are required to be periodically updated according to a statutory schedule (Government Code Section 65588) with 516 of California's 535 jurisdictions with updates due in 2008 and 2009. The timing of these updates creates a unique opportunity for local governments to utilize the housing element process to address critical ongoing supply and affordability issues compounded by the recent downturn in the housing market as well as issues related to resource conservation, greenhouse gas emissions and global warming.

With the growing consensus on the need to address global warming, there is increased consideration of the role of land-use planning in reducing greenhouse gas emissions. Housing element law provides a vehicle and tool to implement smart growth and efficient land-use strategies and provides a framework for regularly reviewing ordinances, zoning and policies that may impede more efficient development.

Local governments should take the opportunity while updating housing elements to consider the impact of existing land uses and resource conservation practices and identify policies and programs to promote affordable housing, higher density development, efficient use of land resources and the energy efficiency of existing housing units. Such policies and action can both address critical housing needs and greenhouse gas emissions. In particular, local governments should consider and incorporate:

- Planning to provide an adequate supply of housing to ensure sufficient affordable housing for full range of income groups to reduce long commutes in search of housing.
- Planning for sufficient housing supply in the right locations - close to jobs, services, and amenities - reducing congestion and long commutes.
- Adoption of higher densities and promotion of infill and compact development patterns to promote housing affordability, maximize existing land resources, reduce pressure to convert agricultural resources, and conserve habitat and environmentally sensitive areas. According to the Urban Land Institute publication *Growing Cooler*, “conserving or developing infill housing within a more urban core has been shown to reduce primary energy consumption an average of 20 percent per household over newer sprawl developments”.
- Local programs or policies for housing element updates to address issues related to green house gas emissions reduction such as:
 - Zoning for and promoting infill and transit-oriented development;
 - Adopting higher densities including along transit corridors; and
 - Applying for or supporting applications for affordable housing funds from agencies that reward and incentivize good planning. Examples include the HCD’s Multifamily Housing Program (MHP) and the Tax Credit Allocation Committee (TCAC) resources which provide competitive advantage for affordable infill housing and affordable housing built close to jobs, transportation, and amenities.

Planning to maximize efficient land-use patterns and development standards, including the incorporation of energy conservation and green building features, can contribute to housing affordability by reducing housing costs for homeowners and renters. In addition, these efforts also promote sustainable community design and reduced dependence on

vehicles, significantly contributing to the reduction of green house gases and assisting the state in meeting targets established in AB 32 (Chapter 488, Statutes of 2006).

The Department continues to expand its technical assistance to local governments to assist in updating housing elements to focus on development standards, policies, and potential strategies conducive to reducing green house gas emissions. In particular, the Department has:

- updated its housing element technical assistance materials to address how local housing planning can achieve climate change benefits and have included such resources in its workshop and training materials,
- produced and made available a green building and sustainability resource guide/bibliography (http://www.hcd.ca.gov/hpd/green_build.pdf); and
- reviewed its technical and financial assistance programs to identify opportunities to encourage green building and sustainability in program awards.

***New
Technical
Assistance
Tool***

As local governments prepare to update their housing elements, the Department continues to improve and expand its technical assistance efforts to assist cities and counties in the preparation and implementation of effective housing elements. In December 2007, the Department launched its newest technical assistance resource – the online Building Blocks for Effective Housing Elements - to assist local governments in preparing housing elements that effectively address the specific requirements of State law and develop effective strategies to meet identified housing needs.

The Building Blocks for Effective Housing Element website provides step-by-step assistance in preparing and updating local housing elements including:

- detailed information about specific statutory requirements;
- information and resources to complete effective analyses of housing needs, resources and constraints;
- sample/model analyses and programs; and

- links to resources for demographic data, current research and reports, housing and land-use funding and policy strategies, helpful public and private industry and advocacy organizations.

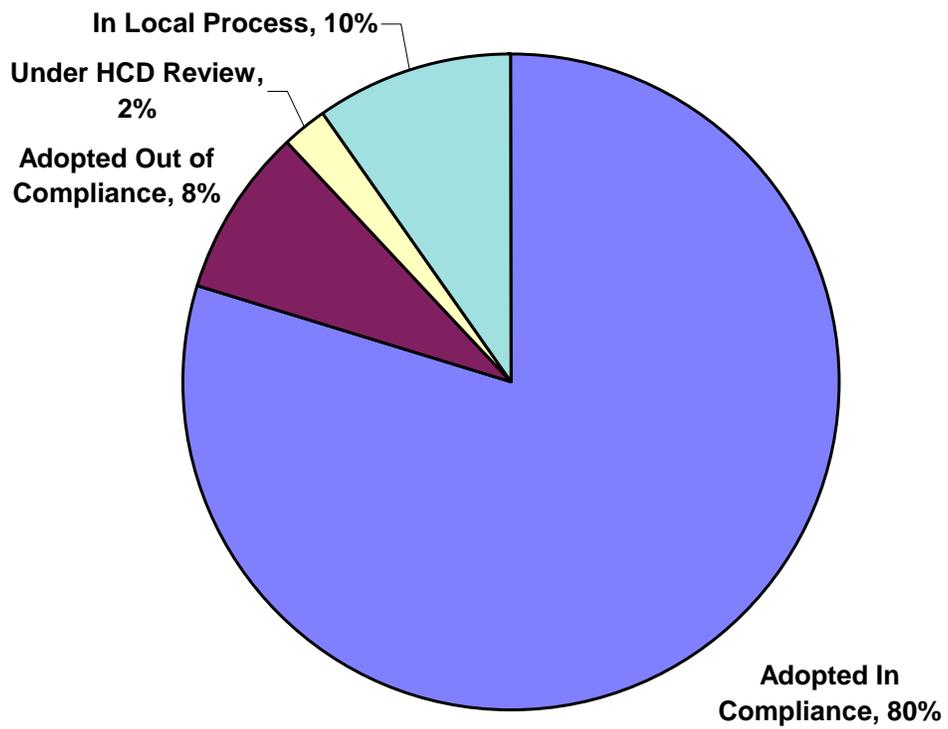

The on-line resource has been well-received by local governments and other stakeholders. The Department continues to update the information and provide additional model analyses and sample programs. The Building Blocks webpage is available at http://www.hcd.ca.gov/hpd/housing_element/index.html.

In addition to the Building Blocks webpage, the Department regularly conducts site visits to assist in the preparation of housing elements. Site visits generally help the Department better understand the circumstances, conditions and efforts of the community. This allows specific one-on-one feedback to facilitate a compliant and meaningful element. The Department remains committed to visit any jurisdiction requesting assistance in the preparation or implementation of the housing element.

In the coming months, the Department will be holding a variety of workshops in the Bay Area to facilitate upcoming housing element updates. Similar to the workshops provided in 2007 for the Southern California region, these workshops will range from smaller discussion oriented workshops and trainings for planners on a sub-regional and jurisdictional basis to larger workshops convening a broad range of stakeholders and interests to present strategies and tools.

Although preparing a housing element lays the foundation for effectively meeting local housing and community development needs, the plans must be implemented to achieve their objectives. For this reason, the Department will continue improving its efforts to facilitate local housing element implementation. The Department's current implementation efforts include assisting local jurisdictions with sample ordinances, assisting with housing related research, administering financial resources, and providing policy guidance and project support including presentations for local City Councils, Boards of Supervisors and Planning Commissions.

Housing Element Compliance as of December 31, 2007

San Diego Association of Governments (SANDAG)

Planning Period 6/30/2005 - 6/30/2010

Southern California Association of Governments (SCAG)

Planning Period 12/31/2000 - 6/30/2008

Adopted Housing Element Status:

IN Compliance: 161 (83%)

OUT of Compliance: 16 (8%)

Under HCD Review: 3 (2%)

Under Local Process: 13 (7%)

Total Jurisdictions 193

Association of Bay Area Governments (ABAG)

Planning Period 12/31/2001 - 6/30/2009

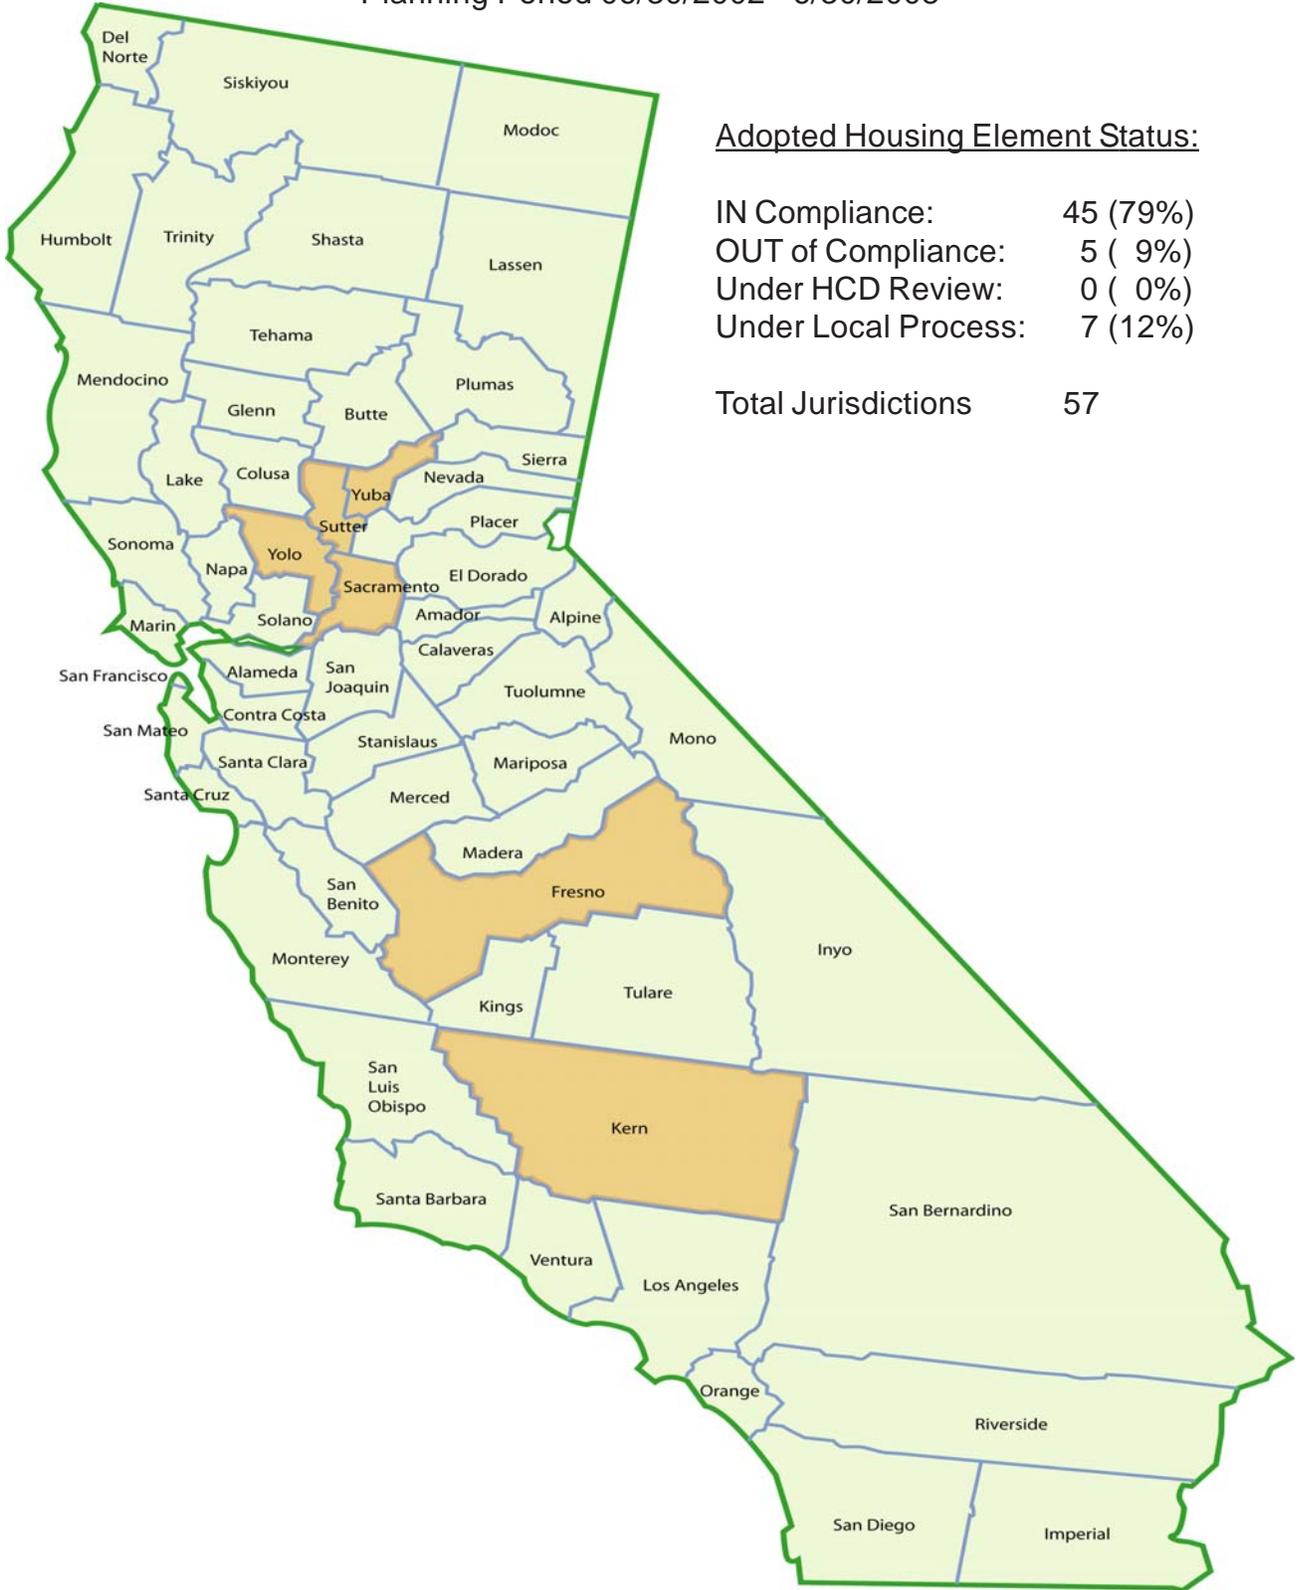

Adopted Housing Element Status:

IN Compliance:	92 (85%)
OUT of Compliance:	8 (7%)
Under HCD Review:	0 (0%)
Under Local Process:	9 (8%)

Total Jurisdictions 109

Council of Fresno County Governments, Kern County Council of Governments, and Sacramento Council of Governments (SACOG)
 Planning Period 06/30/2002 - 6/30/2008

Adopted Housing Element Status:

IN Compliance:	45 (79%)
OUT of Compliance:	5 (9%)
Under HCD Review:	0 (0%)
Under Local Process:	7 (12%)

Total Jurisdictions 57

Association of Monterey Bay Area Governments (AMBAG)

Planning Period 12/31/2002 - 6/30/2009

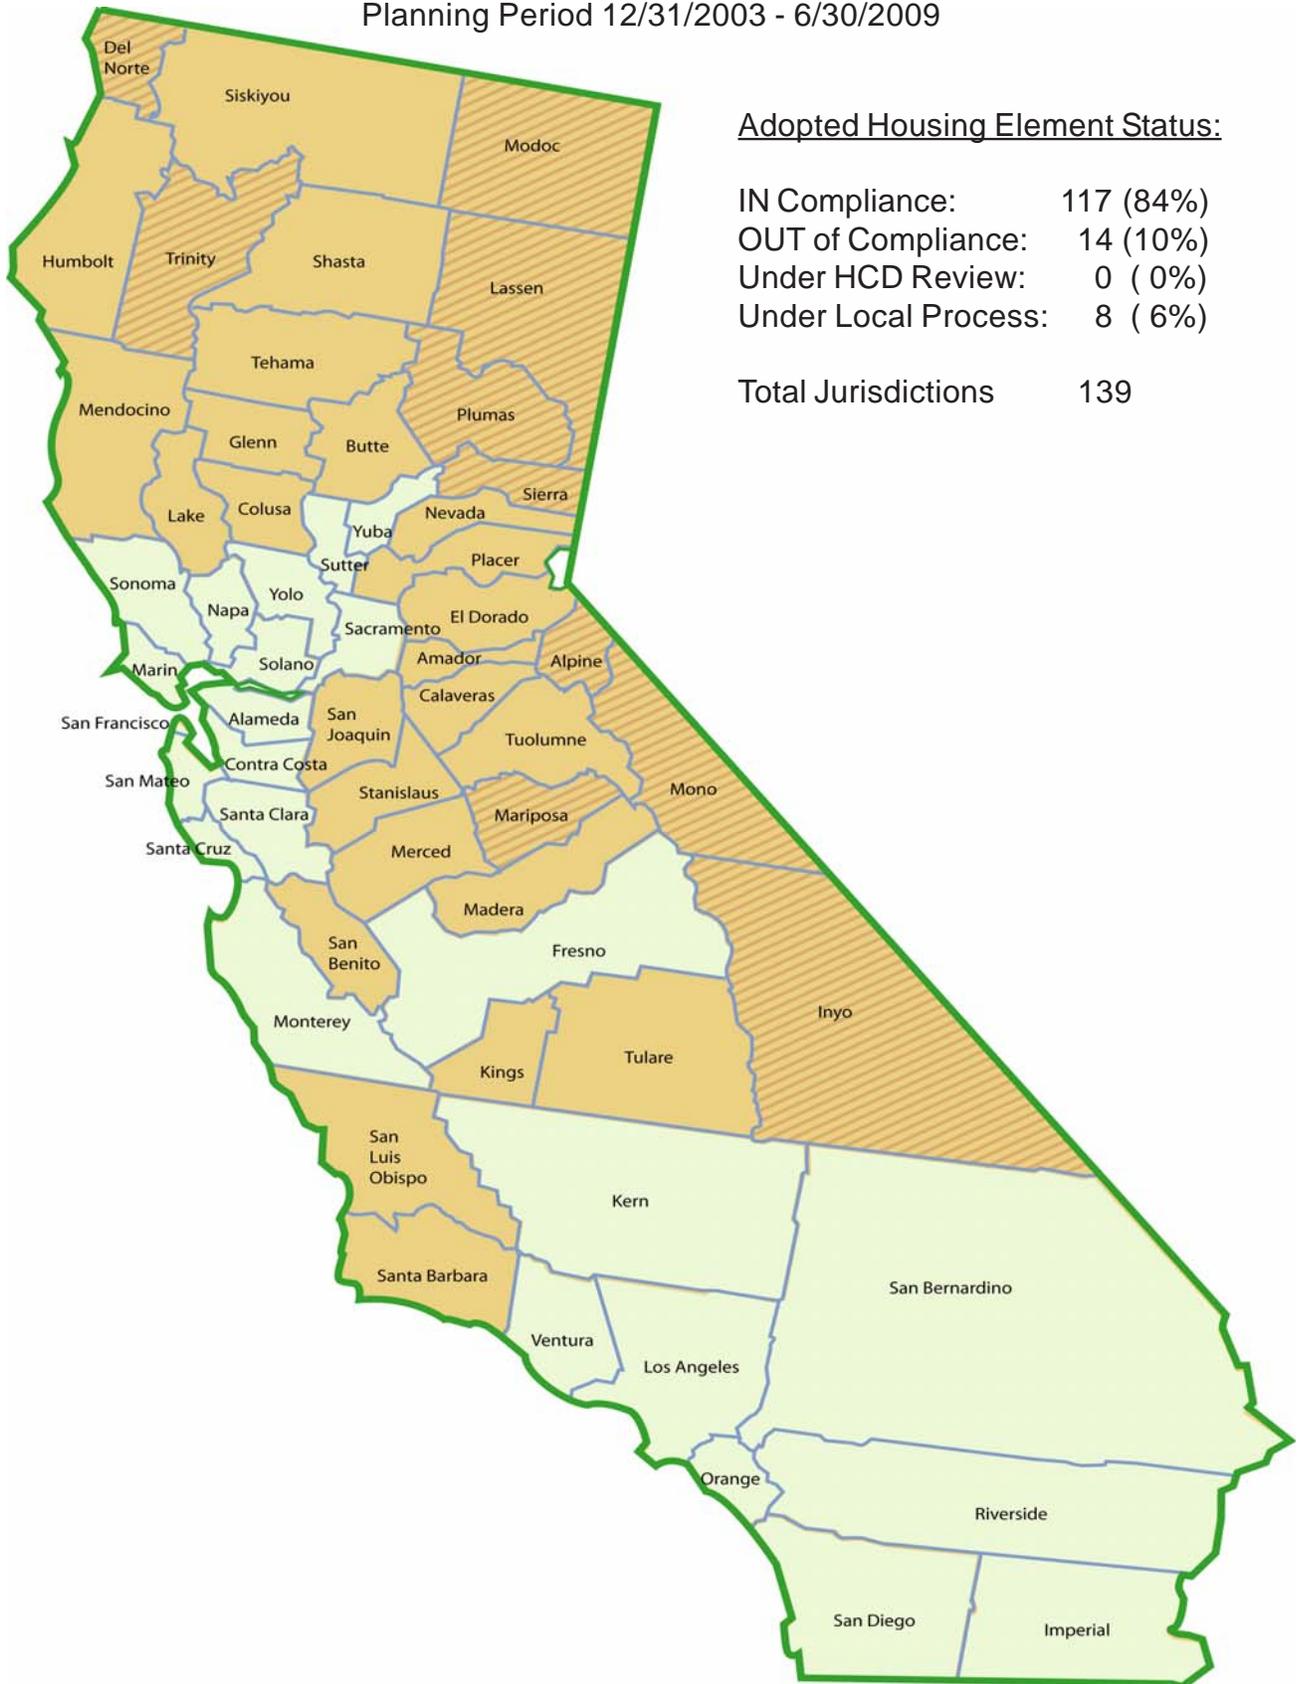

Adopted Housing Element Status:

IN Compliance: 15 (83%)
OUT of Compliance: 2 (11%)
Under HCD Review: 0 (0%)
Under Local Process: 1 (6%)

Total Jurisdictions 18

All Other Local Governments

Planning Period 12/31/2003 - 6/30/2009

APPENDIX

Annual Housing Element Compliance Report - 2007

The Department makes every effort to ensure the following information is complete and accurate. For any questions or clarifications, please contact the Division of Housing Policy Development at (916) 324-8652.

To determine the official status of each jurisdiction's housing element, refer to the column on the right. The definitions of terms are:

IN local government adopted an element the Department found in compliance with state housing element law.

OUT either the local government adopted an element the Department found did not comply with state housing element law, or the local government has not yet adopted a housing element pursuant to the statutory schedule.

IN REVIEW element was under review by the Department as of December 31, 2007.
